

BENEFITS OF INSULATION

ATTENTION! NATIONAL GRID CUSTOMERS

Attic insulation is the single most important measure to increase comfort in your home and drastically reduce your heating bill up to 40%

Draft Reduction:

Air sealing will eliminate openings, gaps and holes around the house that let the cold air in and make your home a comfortable place to live. The air leaks around the windows and doors, through the recessed lights. And the attic access are the major cause for high energy bills.

Non-Toxic and Environmentally Friendly

Recycled cellulose is an option often slated for those with chemical sensitivity. It is safe, non-toxic and eco-friendly. Cellulose is made from recycled materials and contains no harmful chemicals, offering superior energy performance than other insulation materials in a comparable price range.

No Gaps or Voids

This is the principal advantage of blown cellulose over fiberglass batts. The installation of cellulose allows the product to fill the cavity completely and envelope any wires, pipes, cables or framing voids. A well-insulated building keeps your home comfortable all year around, can help with sound proofing and is a Critical element for a more energy efficient home.

Fire Retardant and Insect Repellent

Blown cellulose is normally treated With borate, a fire retardant that also acts as an insect Repellent.
